The New Tomato Harvesters

Special P 135-40"
Special P 135-45"

SPECIAL P 135 is the new line of tomato harvesters designed with the technology of the Pomac brand.

They are the only harvesters on the market with an internal width of 135 cm from the head to the shaker. The internal width of 135 centimeters is optimal for all tomato planting sizes. With a weight of only 131 quintals, perfectly distributed on the 4 wheels, the SPECIAL P 135 line allows harvesting even in extreme conditions.

The internal conveyor belts are made with three bands.

Interesting are the width dimensions of the harvester:

3 meters for the SPECIAL P 135-40 model, with 40-channel selector/s
3.20 meters for the SPECIAL P 135-45 model, with 45-channel selector/s

The dimensions of the conveyor belts, the perfect weight distribution and the great visibility of all the working parts allow an hourly collection of 70 tons.

Mark One

NEW SOFTWARE FOR ELIMINATION OF CLODS OF SOIL

All Pomac sorters produced after the year 2004 can be updated with the new version of the software, which allows the best accuracy in the selection of the tomato and in the elimination of black soil clods, stones and waste.

Mark One is the only Company that can update the Pomac sorters software.

The software update is included in our ordinary sorters maintenance service:

no additional expenses for our customers.

Spare parts service

Mark One, owner of the Pomac brand and technology, provides assistance and spare parts for collecting machines with the Pomac brand and the related electronic sorters.

Mark One is the only Company authorized to supply original spare parts for Pomac machines and the only company authorized to supply assistance and spare parts to the electronic sorters installed on Pomac machines.

Mark One's spare parts service is made of a specialized staff with thirty years of experience in the supply of spare parts for Pomac machinery.

Support & Consultancy

Mark One workforce makes a direct contact with the customer: we strive to provide the end user with an experienced partner, able to cover every specific requirement; our goal is to offer the most efficient and timely response to the customer and the swift delivery of components.

Mark One

METAL CONVEYOR BELTS OFFER

Metal conveyor belts are supplied based on the harvester model and their price varies depending on the harvester's year of production.

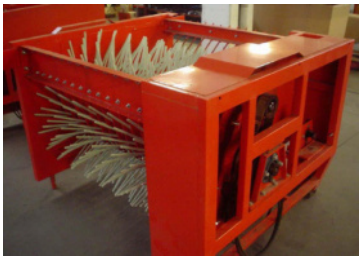
You can request a free and personalized quote: prices for the year 2024 are even more competitive and we are sure to offer you economically interesting proposals.

Mark One

OPTIONAL UNITS FOR POMAC TOMATO HARVESTERS

Motorised spike (right or left)

Complete vibrating rays equipment for plant separation



Rear roller on the transversal belt for the elimination of waste

Rear plant shredder

Iron to rubber conversion of the belt transmission pinions

"Under head" roller supporting the harvesting head

Hydraulic head weight control

Hydraulic spike weight control

ELECTRONIC SORTERS ASSISTANCE

Mark One, owner of the Pomac brand and technology, is the only Company authorized to supply assistance and spare parts to the electronic sorters installed on Pomac machines. The first advantage our customers enjoy when they come to us for servicing: we are the only ones who can updated sorters' software to the new version for the elimination of black soil clods, stones and waste and calibrate sorters to perfection.

Our technical assistance department for electronic sorting machines operates in respect of the existing hardware and software standards and with awareness of the evolving technology for its components.

The staff is highly specialized, with more than ten years' experience in the field, has the technical expertise and operational experience needed to ensure quality service to every customer:

- The instant ordinary maintenance of the selection apparatus, that includes:
  - Thorough cleaning of the sorter at the end of the working season
  - Wear and tear and functionality checks of all mechanical and hardware components
  - Updating of software involved in machine operation
  - Calibration of mechanical components and all selection software
  - Final testing of all functions of the machine
- Free of charge, a complete hardware analysis (both mechanical and electronic parts) of the sorter to inform the customer whether there is a need to replace parts that could limit the proper functioning of the sorting machine during the following working season; a quote is included.
- Free of charge, a specialist technical advice for the upgrading of obsolete hardware to the latest version.

Mark One

ELECTRONIC MODULE UPGRADE

The electronic components of the sorters produced before 2004 are obsolete and out of production.

We recommend that owners of pre-2004 models upgrade their sorter's electronic module to the most recent 2025 model which has significantly higher performance and a clear improvement in product sorting quality.

The update of the electronic module includes the replacement of the electronic parts with those of the latest generation and the updating of the selection software to its most recent version.
